#### **HISTORY**

Paul Beswick, the founder and visionary of the Pro Display Group in the United Kingdom has established VISIONAIR-E in the USA, in response to a high demand for the very latest screen technology in North & South America.

Pro Display is an award winning technology company with a rich heritage of innovation in the visual display industry, this stretches right back to when the founder introduced the first full colour LED Screens into Europe in the early 1990's. Pro Display continues to make substantial investment in R&D, developing its range of optical screen, glass and film technologies.

# DO YOU HAVE THE VISION?

VISIONAIR-E Group has been set up to support and develop new and existing markets within North America, South America and Canada. The companies head office & distribution centre is located in Palm Beach, South Florida.

VISIONAIR-E will offer a number of unique and exciting products within the following sectors-

#### Smart Display Technologies - projection screens, monitors & touch screen solutions

Our CEO / Founder has already designed and developed a complete range of award winning optical screen technologies and is now looking to take this one step further. In combination with many of our tried and tested products VISIONAIR-E will be introducing a number of NEW products and solutions including 4K outdoor TVs / cinema screens, transparent OLED solutions and a high-end 4K UST Laser projector for screen sizes up to 150".

#### Smart Glass Solutions - retro fit switchable smart film and smart glass products

Having developed a unique and comprehensive range of patented smart glass technologies and solutions over the last 20 years, VISIONAIR-E is now looking to expand the market across North and South America . Our plan is to set up a comprehensive installer network covering a wide variety of industry sectors, which will include commercial, residential, retail, hospitality, healthcare and marine.

#### Smart Furniture - bringing future technology into your home and business today

The NEW 'Limited Edition' designer interiors range offers a number of unique, hand crafted pieces of furniture which will become an integral part of the design of your home or business. VISIONAIR-E's smart furniture range incorporates the very latest technology, created for those who dare to be different and wish to show their own design flair and individuality in a world where image has become a way of life.

ABOUT VISIONAIR-E | 7

#### **SMART DISPLAY TECHNOLOGIES**

The VISIONAIR-E team has been involved in the design and development of optical screen technologies for more than 20 years. Having created a number of award winning products and solutions sold around the world.

#### SPECIALIST OPTICAL PROJECTION FILMS

Our specialist optical projection materials include a range of self adhesive films for front, rear and dual projection applications. VISIONAIR-E's optical films have been designed for a wide variety of applications which includes high brightness and sun viewable films for digital signage, high contrast films for video / home theatre and transparent films for holographic effects.

#### SPECIALIST OPTICAL PROJECTION SCREENS

VISIONAIR-E offers a complete range of rigid optical projection screens for front, rear and dual projection applications, which include Vision™ rear projection acrylic screens, Privado™ switchable glass screens, Geminivision™ dual projection screens and Digital Glass™ the world's largest rigid rear projection screens in sizes up to 315" x 118". Our front projection line up includes Laservision™ a transparent front projection screen and Eclipsevision™ a light rejecting screen technology for high ambient conditions, specifically designed for UST projection.

#### REFLEXIO™ MIRROR SCREEN TECHNOLOGY

Our mirror screen technology, Reflexio™ includes our standard range of 4K smart TVs and digital advertising monitors, retro fit mirror glass overlays to fit to any LCD / LED display and custom mirror video wall solutions.

#### HELIOS™ OUTDOOR SCREEN TECHNOLOGY

The Helios™ line up of high brightness screens includes a range of 4K outdoor TVs in screen sizes 43" – 86" and a selection of wall mount digital advertising screens and free standing kiosks.

#### **EVOLVE™ TRANSPARENT LCD TECHNOLOGY**

VISIONAIR-E provides a complete range of transparent LCD solutions including framed screen panels with media board/cables for simple integration into your own housing, screen sizes 9.7"–98". Alternatively for the complete solution you can choose one of our standard display cases in screen sizes 19" – 65" or we can offer custom built display housings for screen sizes up to 98".

#### **AURORA™ TRANSPARENT OLED SCREENS**

For the ultimate display technology we have Aurora<sup>TM</sup>, this 55" transparent screen technology is a stand alone display requiring no back lighting system. Available as a table top display with minimal round base, interactive kiosk with free standing plynth (portrait) or video wall module for multi displays.

#### **ALPHA™ MULTI-TOUCH SCREEN SOLUTIONS**

The Alpha<sup>™</sup> range of multi touch displays includes a number of monitor base solutions including both our mirror and transparent screen technologies. Other products include a 55" free standing kiosk, custom touch screen tables, retro fit interactive IR frames and PCAP interactive foils.

#### **SMART GLASS SOLUTIONS**

#### **HISTORY**

The CEO / Founder of VISIONAIR-E has a long history in PDLC technology having developed a unique and comprehensive range of patented smart glass products and solutions over the last 20 years, VISIONAIR-E is now looking to expand the market across North & South America. Our plan is to set up a comprehensive installer network covering a wide variety of industry sectors, which will include commercial, residential, retail, hospitality, healthcare and marine.

#### INNOVATION

VISIONAIR-E are proud of their British heritage and dedicated to manufacturing the highest quality products. Based on the very latest polymer dispersed liquid crystal (PDLC) technology, switchable smart glass operates using a simple ON-OFF system, switching the glass from frosted to clear at the press of a button, acting as an electronic 'blind' creating privacy, security and energy efficiency in any environment. The applications for switchable smart glass technology are endless, from award winning architectural projects, to unveiling the world's most luxurious cars, we have seen our smart glass products become the perfect solution in a wide range of environments, including homes, businesses, leisure facilities, transportation and much more.

#### **PRODUCTS**

#### SELF ADHESIVE SWITCHABLE SMART FILM

Self adhesive switchable smart film is our most popular product, designed to retro fit to existing glass or other smooth transparent surfaces (acrylic or polycarbonate) it provides a simple and cost effective alternative to other switchable technologies. It is manufactured with a self adhesive cling layer on one side, making it easy to apply to both new and existing glass. For large windows & glass walls, the film can be joined to create a switchable surface for both privacy and security. The film is also a high definition projection surface to display video presentations and movies.

#### SINGLE LAYER LAMINATED SMART GLASS

Single layer laminated smart glass is our most cost effective switchable glass solution where the liquid crystal layer is coated down directly onto the glass surface. This means the PDLC layer can be coated onto different types and thicknesses of glass dependant upon the customer's needs and application, still offering the safety and security of a laminate at a much lower price. The glass is also a high definition projection surface to display video presentations and movies.

#### **DOUBLE LAYER LAMINATED SMART GLASS**

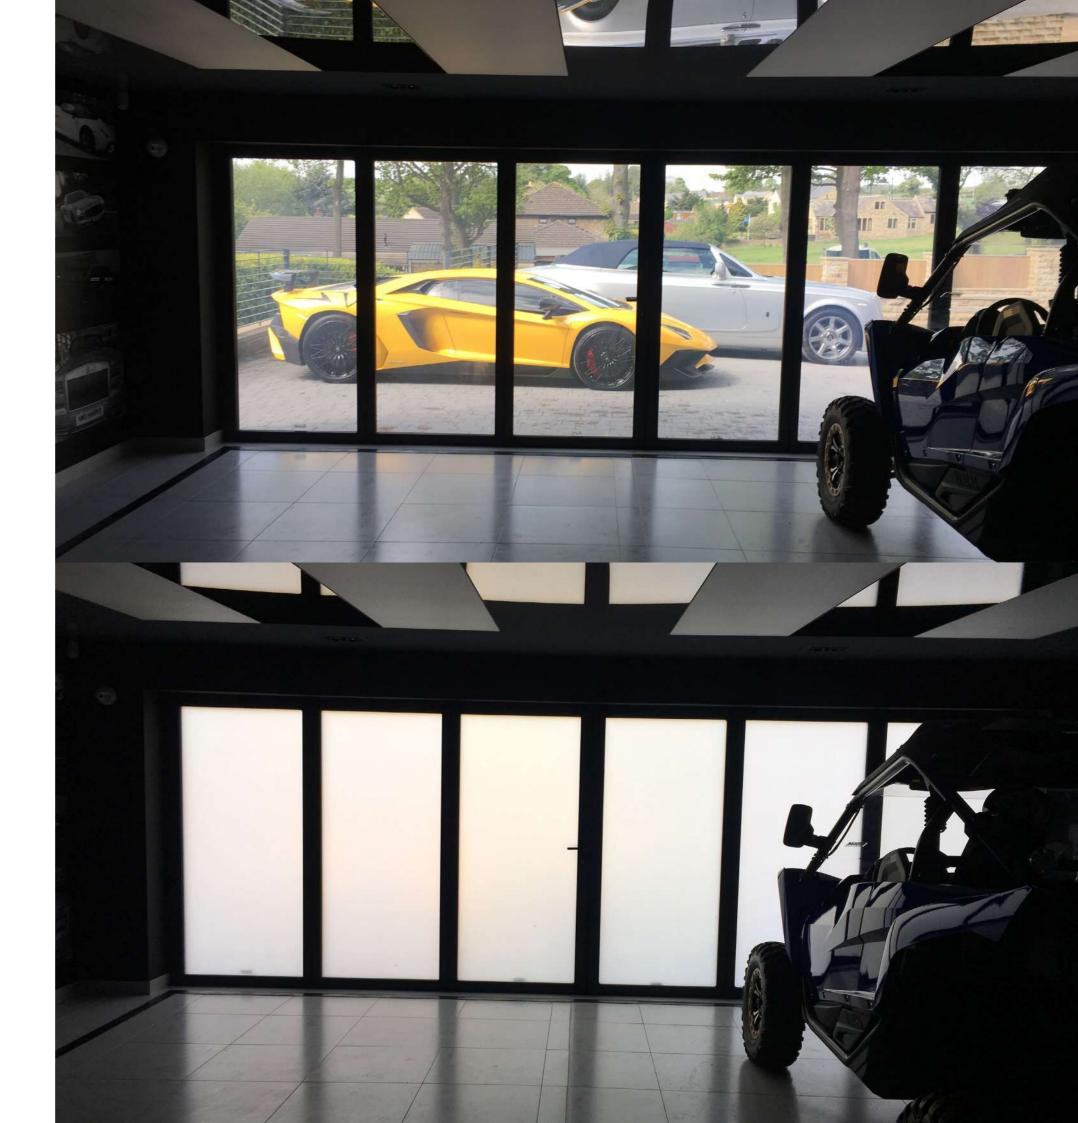

Double layer laminated smart glass is our most secure and durable smart glass product, designed for high traffic areas and wet environments such as bathrooms, hospitals, clean rooms etc. This type of smart glass is manufactured with the PDLC layer bonded between two sheets of glass, adding greater protection, increased safety and making it easier to clean / maintain in the workplace.

#### **DOUBLE GLAZED INSULATED SMART GLASS**

Double glazed insulated smart glass utilises a warm edge spacer bar and argon filled airgap in between two layers of glass – one layer with the PDLC coating and one clear glass, sealed with butyl. This type of smart glass provides greater insulation, performance and efficiency, designed mainly for external windows / doors it is the ideal alternative to old fashioned blinds and curtains.
